

DanTabs® - at Enggris

In Danish Pig Production there has in many years been a huge focus on minimize the numbers of stillborn piglets. The problems already turned up around insemination/mating and the following time. And that's why DanTabs®, with it's unique composition, is the right tool to reduce the numbers of stillborn piglets.

“Before we were gathered 5-6 small piglets every week after farrowing. We have now more than halved the numbers.”

Farmer Jørgen Christiansen, Director at Enggris ApS

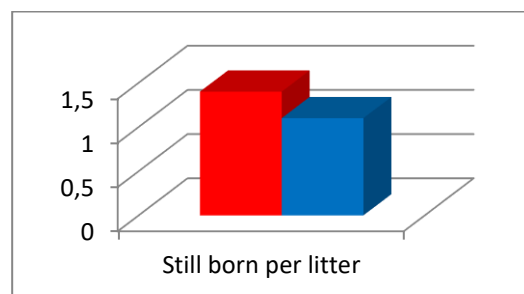

tells:” I have to say, there is a clear trend that the numbers of, alive born piglets’ increases by use of DanTabs®. We have also learned a magnificent increase in stronger piglets. This have of course shown a positive result in our production report.”

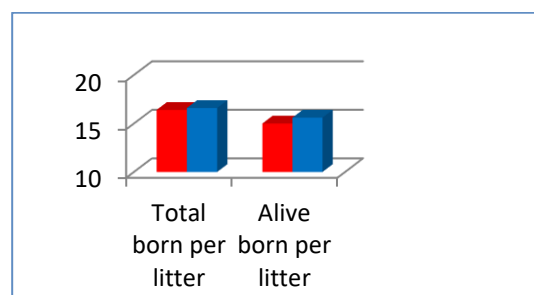

By help of a unique composition of including organic bases minerals increases DanTabs® blood flow all the way to the uterus. This increase in blood flow means that all “fetuses” will have the same approach nutrients.

The Manager at Enggris and co-owner Bernt tells: “Before we were gathered 5-6 small piglets every week after farrowing. We have now more than halved the numbers. And today we only collect in around 2 litters of small piglets per week. They are also stronger than usually”. Bernt tells furthermore that DanTabs® are practical to use in there busy day in the farm, and the sows enjoy eating them.

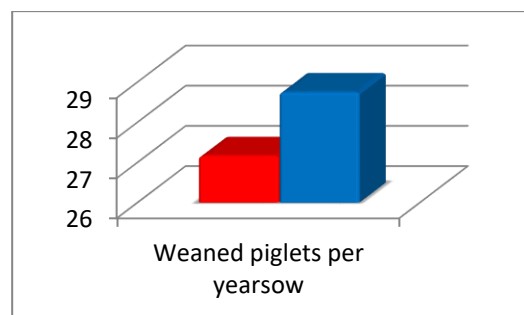

When we analysis the results by Enggris, we can clearly see the results that DanTabs® has provide.

When you see at the numbers of still born per litter, you can see a decrease on 0,3 piglet per litter.

Alive born piglets per litter has increased with 0,6 piglet per litter. This is a great value for the production at Enggris.

When we look at the numbers of weaned piglet per sow per year, we can see a significant difference by use of DanTabs®. The piglets have been much stronger and viable by using DanTabs®.

Jørgen Christiansen tells with a satisfied smile on his face;” we have just made the new production report, and the numbers keep ongoing the right way. We will absolutely use DanTabs® to our sows in the future”.
